

LANDMARK TRACKING

LMT MDVR VIDEO MONITORING

Monitoring your vehicle has never been this easy with the trusted LMT MDVR solution.

24/7 HD Fleet Monitoring Made Simple

Our system can be installed and used in vehicles such as;
Trucks, Buses, Industrial Equipment, Cars, Delivery Vehicles etc.

Our LMT MDVR video monitoring solution empowers fleet managers to monitor vehicles of any size effortlessly and around the clock.

This robust yet discreet system offers 4 to 8 channels of high-definition video recording, delivering crystal-clear footage day or night. Plus, with ample storage capacity, there's no need to overwrite past recordings.

But that's not all, the system also issues instant alerts for critical events like speeding, harsh braking, reversing, door activity, and ignition start/stop.

Each alert includes a snapshot and full video playback and can be easily integrated with GPS-enabled tracking to help you manage and monitor your fleet's location and behaviour simultaneously.

It's Robust and Discrete

Keep a watchful eye on your fleet and staff, both on and off road

Rugged, All-Weather Design:

Built to withstand the harsh South African climate, our MDVR system is tough enough for rain, heat, dust, and everything in between.

Seamless Integration:

Fully compatible with our cloud platform, allowing for remote access across devices anytime, anywhere.

Multi-Channel Monitoring:

Supports between 4 and 8 channels, allowing you to monitor the front, back, sides, and interior of your vehicles with complete flexibility (including discreet mini-cameras).

High-Capacity Storage:

Each unit offers up to 2 terabytes of storage, enabling you to store weeks, even months, of footage without hassle.

Live Streaming:

Enjoy real-time video and audio feeds of your fleet's movements and activity, ideal for fast decision-making and incident response.

Built-In GPS Tracking:

Monitor not only what your fleet is doing, but where they are in real time.

ADAS and DMS Integration:

Our latest models also include integrated ADAS (Advanced Driver Assistance Systems) and DMS (Driver Monitoring Systems) for real-time alerts and driver accountability.

Telematics hardware captures and transmits live video, tracking, and other data into the advanced dashboard on your device

Industries that can benefit from the LMT MDVR video monitoring device

Government,
Local Authorities,
Municipalities and
Public Transport

Transport and
Logistics

Mining and Yellow
Equipment

Airlines (Aviation)

Agriculture

Other Industries

Keep a watchful eye on your fleet with ease!
